- Injection can be performed in the shoulder IM or sub Q
- Spot location in the penis or vagina is not necessary but recommended.
- Consult the Beyond Stem Cells Magazine or GAINSwave about pulsatile sound wave.
- Follow AmnioWellness protocol.

Additional: AmnioWell vs PRP

AmnioWell and PRP may be used in a similar way. AmnioWell contains over 900 different birth derived proteins including growth factors, chemokines, and cytokines. billions of exosomes and high molecular weight hylauronic acid. PRP, provides approximately less than 10 growth factors that are as old as the patient and dependent upon their health. PRP's growth factors have been through the patient's life trauma but may still be beneficial. PRP injections are prepared by drawing one or more tubes of the patient's own blood and running it through a centrifuge to concentrate the platelets. The activated platelets are then injected directly into your injured body tissue. AmnioWell, however, is harvested from strictly tested and then qualified c-section births. The donated and concentrated fresh

amniotic growth factors and exosomes are quantified in a FDA approved lab under strict FDA guidelines. AmnioWell is consistent from birth, therefore, it renders consistent results.

The combination treatment of PRP and AmnioWell Has been utilized by physicians.

It is not recommended to utilize AmnioWell(AF) without first doing a GAINSwave treatment. We consider treatment as the training and the AmnioWell(AF) as the healing.
